# Converging Systems Module
Available on the Compass Control®

Converging Systems ILC-x00 LED Lighting Controllers are now compatible with the Compass Control® System, the first fully integrated major control system built from the ground up to use iOS & Android devices – as its backbone.

Key Digital has developed a driver and a pre-configured GUI template for their Compass Control® system to interface with Converging Systems' LED lighting control products. These systems enables a wide range of LED adjustment options to be easily selected, saved, and programmed directly through any Compass Control® interface – including the ability to modify RGB, as well as HSB (Hue, Saturation, and Brightness), to emit captivating blends of up to 16.7 million colors. These controllers can be interfaced with Compass Control® through either the Converging Systems' e-Node™ for IP control or the IBT-100™ for RS (serial) control.

Module Features:

› Bi-Directional Control over RS and IP
› Support for up to 15 unique LED Controllers
› Full Color Picker for custom color changes
› Basic and Advanced page for Custom uses
