

# GE Lighting energy smart® Module Available on the Compass Control®

GE Lighting energy smart® products are now compatible with the Compass Control® System, the first fully integrated major control system built from the ground up to use iOS & Android devices – as its backbone.

Key Digital has developed a driver and a pre-configured GUI template for their Compass Control® system to interface with the GE Lighting. These products and profiles are rigorously tested by Key Digital. The GE Lighting driver will allow for full bi-directional driver over RS control, dimmer/switch control for lighting, and z-wave lighting, while having access to a fully integrated control system with additional video, audio, climate and automation controls.

## Module Features:

- › Full Bi-Directional Driver over RS control
- › Dimmer/Switch Control for Lighting
- › Z-wave Lighting
